

MUTASPACE CYBER LEARNING

Cyber Lab Safety Agreement

Authorization, privacy, evidence, responsible testing, and professional conduct.

Student agreement

Professor Chidinma Agwu

chidinma.agwu@hccs.edu

**CANVAS IS THE
COURSE RECORD**

Use Canvas for section announcements, schedules, grades, instructions, feedback, and official assignment submissions.

PURPOSE

Security skills must be practiced safely and lawfully.

Course activities may include system administration, traffic analysis, vulnerability review, access control, encryption, monitoring, incident response, and other security techniques. These skills may be used only inside the scope approved by the instructor.

CORE RULE

Authorization is not implied by technical access. If a system, account, network, file, or technique is not clearly included in the activity, stop and ask before proceeding.

CHECK	ITEM	NOTES
	AUTHORIZED SCOPE	
☐	I will use only instructor-approved systems, accounts, networks, virtual machines, files, and targets.	
☐	I will follow the written rules of engagement and stop when the assigned scope ends.	
☐	I will not scan, exploit, disrupt, intercept, or test real systems or another person device.	
	CREDENTIALS AND ACCESS	
☐	I will not request, collect, share, reuse, or publish passwords, tokens, private keys, or unauthorized credentials.	
☐	I will not attempt to bypass access controls or increase privileges unless the activity explicitly authorizes it.	
☐	I will use only the account assigned to me and will not impersonate another user.	
	DATA AND PRIVACY	
☐	I will use fictional, sample, or sanitized data whenever possible.	
☐	I will not copy, retain, or publish personal, confidential, restricted, or unnecessary data.	
☐	I will remove private details from reports, screenshots, GitHub repositories, and portfolio pages.	

PROFESSIONAL LAB CONDUCT

Protect the environment, the evidence, and the learning community.

CHECK	ITEM	NOTES
☐	I will document commands, configuration changes, findings, and results accurately.	
☐	I will not fabricate evidence, alter results, or claim work that I did not complete.	
☐	I will use snapshots, backups, and instructor-approved recovery steps when an activity could change a system.	
☐	I will preserve relevant evidence before making changes during an investigation.	
☐	I will not move malware, exploit code, or dangerous files outside the approved isolated environment.	
☐	I will not use course activities to harass, embarrass, monitor, deceive, or harm another person.	
☐	I will report unexpected access, real sensitive data, unsafe behavior, or scope confusion immediately.	
☐	I will stop the activity if a command affects an unintended target or produces unexpected behavior.	
☐	I understand that course access may be limited or removed if I do not follow the safety requirements.	

ESCALATION

Use a simple stop, preserve, report process.

**STOP, PRESERVE,
REPORT**

Stop the activity, preserve the relevant evidence, contact Professor Chidinma Agwu through Canvas or chidinma.agwu@hccs.edu, and resume only after the safe next step is clarified.

SCOPE EXAMPLES

Know what belongs inside and outside an authorized course activity.

ALLOWED IN AN APPROVED LAB	NOT ALLOWED
Scan an instructor-provided virtual machine that is listed in the activity scope.	Scan a campus, home, public, or third-party network without written authorization.
Analyze an instructor-provided packet capture, log set, or forensic image.	Inspect another student's account, device, files, messages, or network traffic.
Use sample credentials and approved tools inside the isolated course environment.	Use real credentials, bypass controls, or extend access beyond the assigned task.
Publish a sanitized summary that explains methods, findings, and lessons learned.	Publish Canvas screens, passwords, tokens, personal data, private infrastructure details, or harmful files.

ACKNOWLEDGMENT

Confirm your understanding before participating in hands-on activities.

By signing below, I acknowledge that I have read this agreement, understand the boundaries, and will complete course security activities only within the approved scope.

Student printed name

Course section

Student signature

Instructor acknowledgment, if required

QUICK SAFETY REFERENCE

Use these four actions whenever the scope or result is uncertain.

1. Stop the activity

Do not continue testing or attempt an unapproved repair.

2. Preserve the evidence

Save relevant output and avoid unnecessary changes.

3. Report the issue

Contact Professor Chidinma Agwu through Canvas or email.

4. Wait for direction

Resume only after the authorized next step is clear.

INSTRUCTOR CONTACT

For course information, assistance, or a safety concern, email chidinma.agwu@hccs.edu or send a message through Canvas.
