

MUTASPACE CYBER LEARNING

GitHub Portfolio Setup Checklist

Create, publish, document, and safely maintain your cybersecurity portfolio.

Student portfolio guide

CANVAS IS THE COURSE RECORD

Use Canvas for section announcements, schedules, grades, instructions, feedback, and official assignment submissions.

PORTFOLIO PURPOSE

Use GitHub Pages to demonstrate applied security skills.

Your portfolio is a public website that documents selected course projects. It should help another person understand what you worked on, how you approached the problem, what evidence supports the result, and what you learned.

**OFFICIAL
SUBMISSION**

Saving a portfolio URL on the course website does not submit it. Enter the published address in Canvas when your section instructions request it.

CHECK	ITEM	NOTES
	ACCOUNT AND IDENTITY	
[]	Create a GitHub account using a professional username.	Avoid usernames that you would not place on a resume.
[]	Use a strong, unique password and enable available account protections.	Do not reuse your school or personal passwords.
[]	Add a professional display name and short bio.	Do not include private contact information.
	REPOSITORY AND PUBLISHING	
[]	Create the public portfolio repository.	For a user site, use username.github.io as the repository name.
[]	Add an index.html file or approved starter site.	The home page should load without a directory listing.
[]	Enable GitHub Pages from the correct branch and folder.	Use the current GitHub settings shown in the official guide.
[]	Open the published .github.io address and test it in a private browser window.	Confirm that the public can reach only the intended content.
[]	Save the final portfolio URL in your records.	Submit the URL through Canvas when instructed.

PORTFOLIO STRUCTURE

Create a clear path from your identity to your projects.

Home page

Your name, professional focus, short introduction, and clear navigation.

About page

Background, interests, current learning goals, and the type of work you want to pursue.

Skills section

Security concepts, operating systems, networks, tools, documentation, and communication skills supported by projects.

Projects section

Selected course missions with readable titles, summaries, evidence, findings, and reflections.

Contact method

A professional method that does not expose private information.

Accessibility

Readable contrast, descriptive links, useful headings, captions, and alternative text for important images.

PROJECT DOCUMENTATION

Every project should answer seven questions.

CHECK	ITEM	NOTES
☐	What was the scenario?	Explain the fictional or approved problem in your own words.
☐	What was authorized?	State the lab scope, systems, data, and techniques you were allowed to use.
☐	What did you do?	Describe the process, tools, commands, configuration changes, or analysis steps.
☐	What evidence matters?	Use sanitized screenshots, diagrams, tables, logs, or results with captions.
☐	What did you find?	Summarize the technical finding and its importance.
☐	What did you recommend?	Explain the control, remediation, or response and why it fits the evidence.
☐	What did you learn?	Connect the work to Security+ and identify what you would improve next time.

PRIVACY AND SECURITY REVIEW

Publish proof of skill, not sensitive information.

CHECK	ITEM	NOTES
☐	Remove passwords, access tokens, API keys, private keys, session cookies, and hidden flags.	
☐	Remove real student names, grades, Canvas screenshots, instructor messages, and private email content.	
☐	Remove real internal addresses, device names, confidential diagrams, and organization data.	
☐	Do not upload restricted assignment files, answer keys, proprietary material, or full raw evidence sets.	
☐	Replace sensitive details with fictional examples, redacted labels, or written summaries.	
☐	Check repository history for accidentally committed secrets before sharing the URL.	
☐	Review every image at full size for visible tabs, notifications, usernames, paths, and personal details.	
☐	Confirm that links work and that no project page exposes more than the written summary requires.	

STOP AND ASK

If you are unsure whether a file or screenshot is safe to publish, do not upload it. Ask Professor Chidinma Agwu through email or Canvas.

FINAL PORTFOLIO REVIEW

Complete these checks before submitting the URL.

CHECK	ITEM	NOTES
☐	The published GitHub Pages URL opens without requiring a sign-in.	
☐	Navigation works on desktop and mobile layouts.	
☐	The About, skills, projects, and contact areas are complete.	
☐	Every selected project includes context, process, evidence, findings, Security+ connection, and reflection.	
☐	Spelling, grammar, headings, link text, captions, and file names are professional.	
☐	No sensitive, private, restricted, or misleading content is published.	
☐	The final URL has been submitted through Canvas according to the section instructions.
